THE ULTIMATE TOOL FOR MOBILE BUSINESSES & PROCESSES

Searching for a tool that will increase your team's performance while being aligned with your current processes? Resco Cloud is a platform that, like a set of building blocks, enables you to build and configure a business solution tailored specifically to your needs.

More than 2,000 corporate customers from various sectors currently make use of Resco Cloud thanks to its flexibility. We believe you should never be limited with the components you have to work with. You know your business better than anyone else and that's why instead of forcing a product on you, we provide you with our Woodford configuration tool, where you can easily pick features and entities you will actually use.

Resco Cloud offers more than 800 features such as custom forms, calendars, photo capture, interactive charts and maps, GPS tracking, electronic signature support, email integration, barcode scanning, branding options and so much more. Should you ever need to change your app, you can do so with just a few clicks and publish them straight away. This enables the solution to easily scale with you.

The result? Helping everyone in your team. The back office can easily create schedules, collect and analyze data and plan routes. Mobile team members get one handy app packed with everything they might need. Now, they can give presentations, collect customer feedback, carry out inspections, or create and sign orders right in the field. And what's best, they can do it while offline. The mobile app stores all changes locally, and enables them to simply sync data afterwards when they are connected to a wi-fi or data network.

Flexible, feature-rich and truly mobile, Resco Cloud helps you to streamline your arsenal and make your everyday processes more engaging and productive.

PICK YOUR PRODUCT

MOBILE SALES

Calendars, activities, presentations, stock info, product documentation, communication tracking, route planning and even the possibility to create orders all in one handy app are the tools your sales team is dying to use.

FIELD SERVICE

Create a schedule for your field workers with ease and notify them instantly. Give your team a step-by-step guide for repairs used on-site, and ensure the task gets done properly and fast. Log any photo documentation, edit pictures, and really show what the problem is and what's been fixed.

INSPECTIONS

Create, assign, complete and evaluate field inspections with ease. Set up unique questionnaires, surveys, checklists, and even to-do lists. Assign them to your staff in the field and give the tool to complete inspections effectively. Analyze collected data afterwards. Resco Inspections consists of four apps – a Designer, Scheduler, Inspector and Analyst – which enable you to shape every step of your inspection process.

ROUTE PLANNER

Plan routes for you team members and keep track of their work progress. The app can help you by dynamically updating the schedule based on past and current data. With additional information about traffic and weather, you can make sure everything gets done on time, by using the most out of your day, regions, and teams.

CITY SMART SERVICES

An Intelligent platform for local governments transferring your city to the 21st century. Be digitally transformed and provide residents with an app enabling them to report problems in the neighborhood such as, potholes or damaged public property. Assign reported tasks to a service technician and notify citizens once it has been resolved. Transparency and teamwork in one.

WHAT ABOUT SECURITY?

We go above and beyond to ensure your information is safe. Secure data transfer, password protection, encrypted local storage, and no middleware to store or cache device data are just the beginning.

We go the extra mile by offering you the possibility to manage all mobile devices and block the ones that may have been compromised. System admins can also remotely lock the application or wipe out data from it.
