

Streamline your inspection process

- Custom questionnaires
- 100% offline
- Connect to Microsoft Dynamics 365/CRM, Salesforce, and more

How it works

Build questionnaires for any use case in Designer

Plan and manage field work in Scheduler

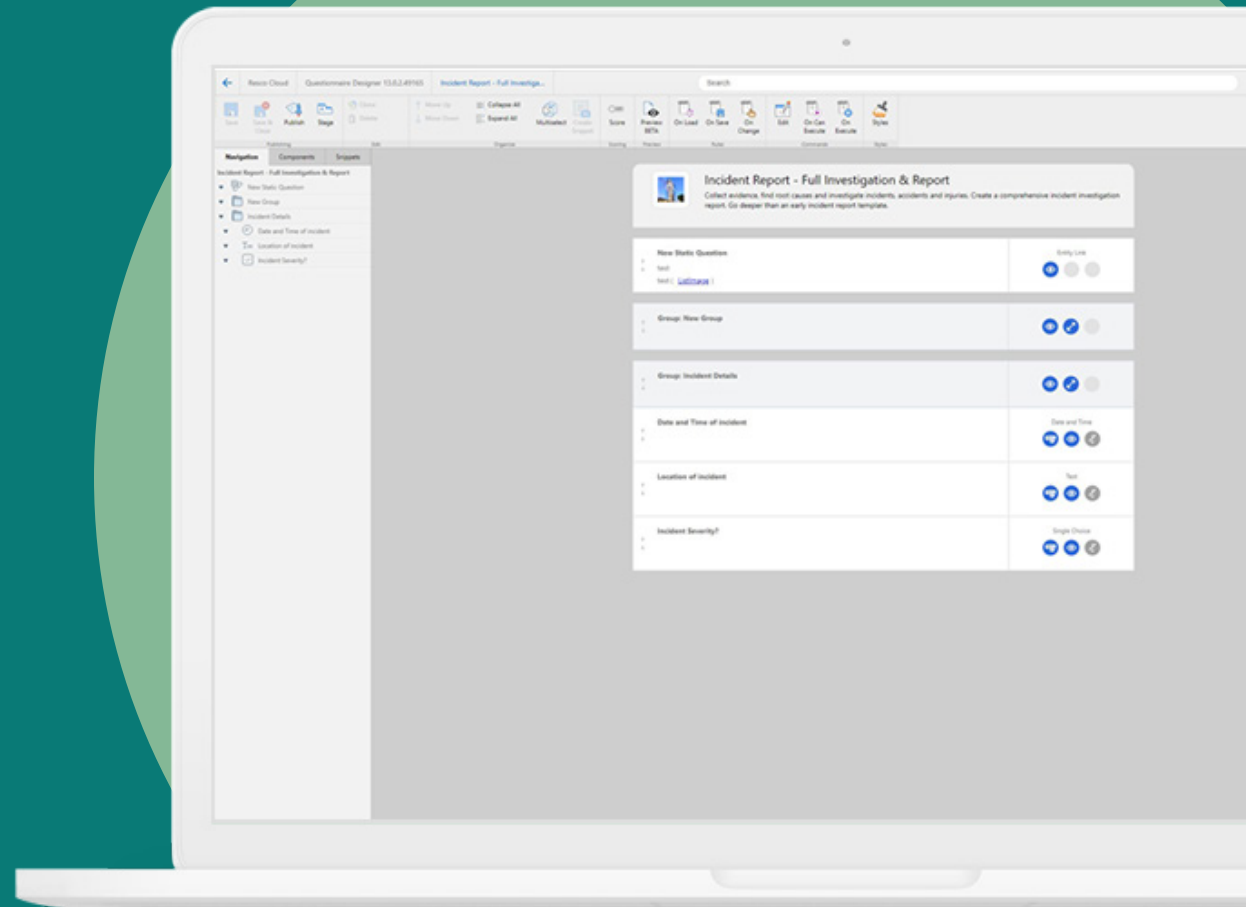

Run inspections with Inspector, even offline

Dissect and visualize data with Analyst

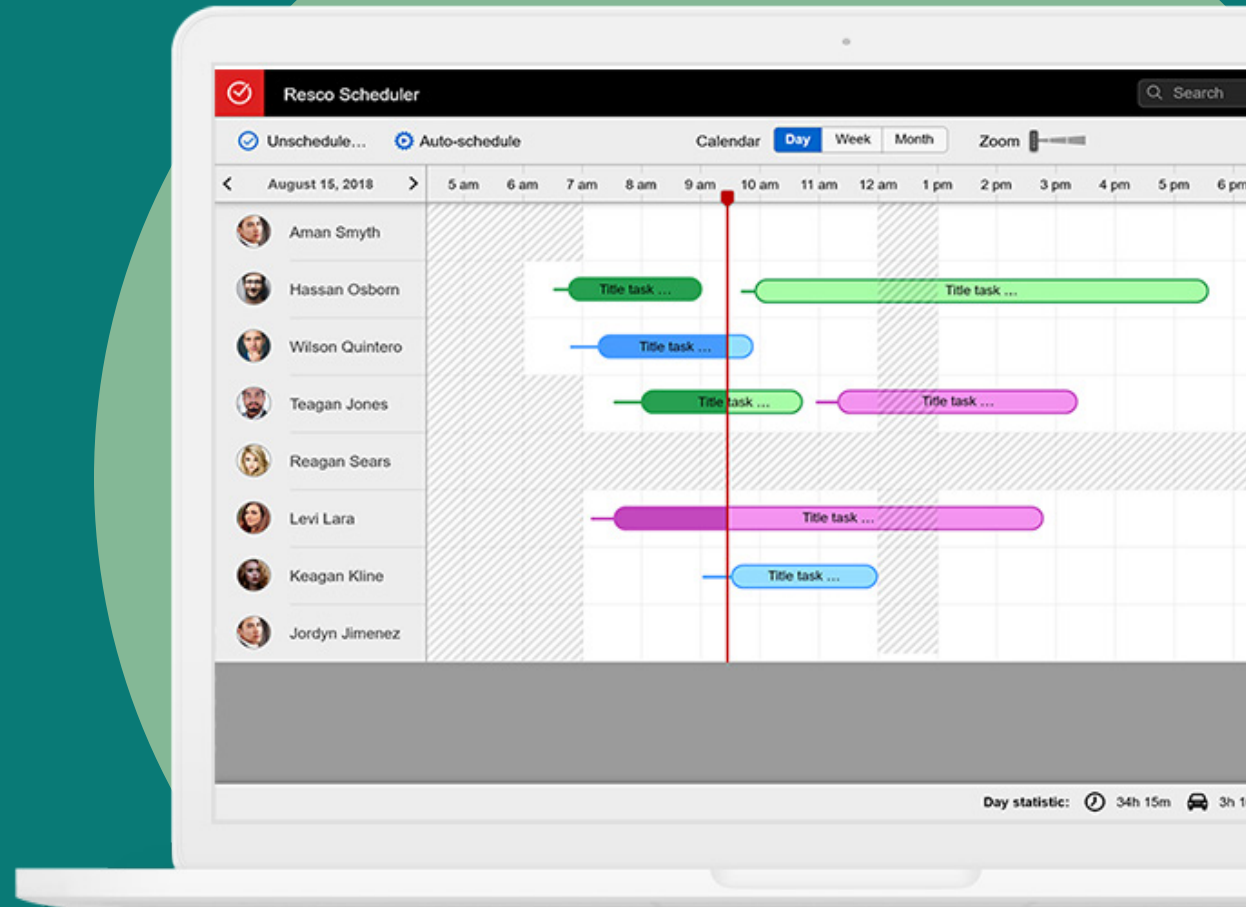

Designer

- Intuitive drag-and-drop UI
- Large variety of question types – include media upload, electronic signatures, barcode scanning, and more
- Save questions as reusable snippets
- Supports custom business logic – show questions based on previous answers, add validation, apply conditional styling, and more
- Expand functionality with JavaScript

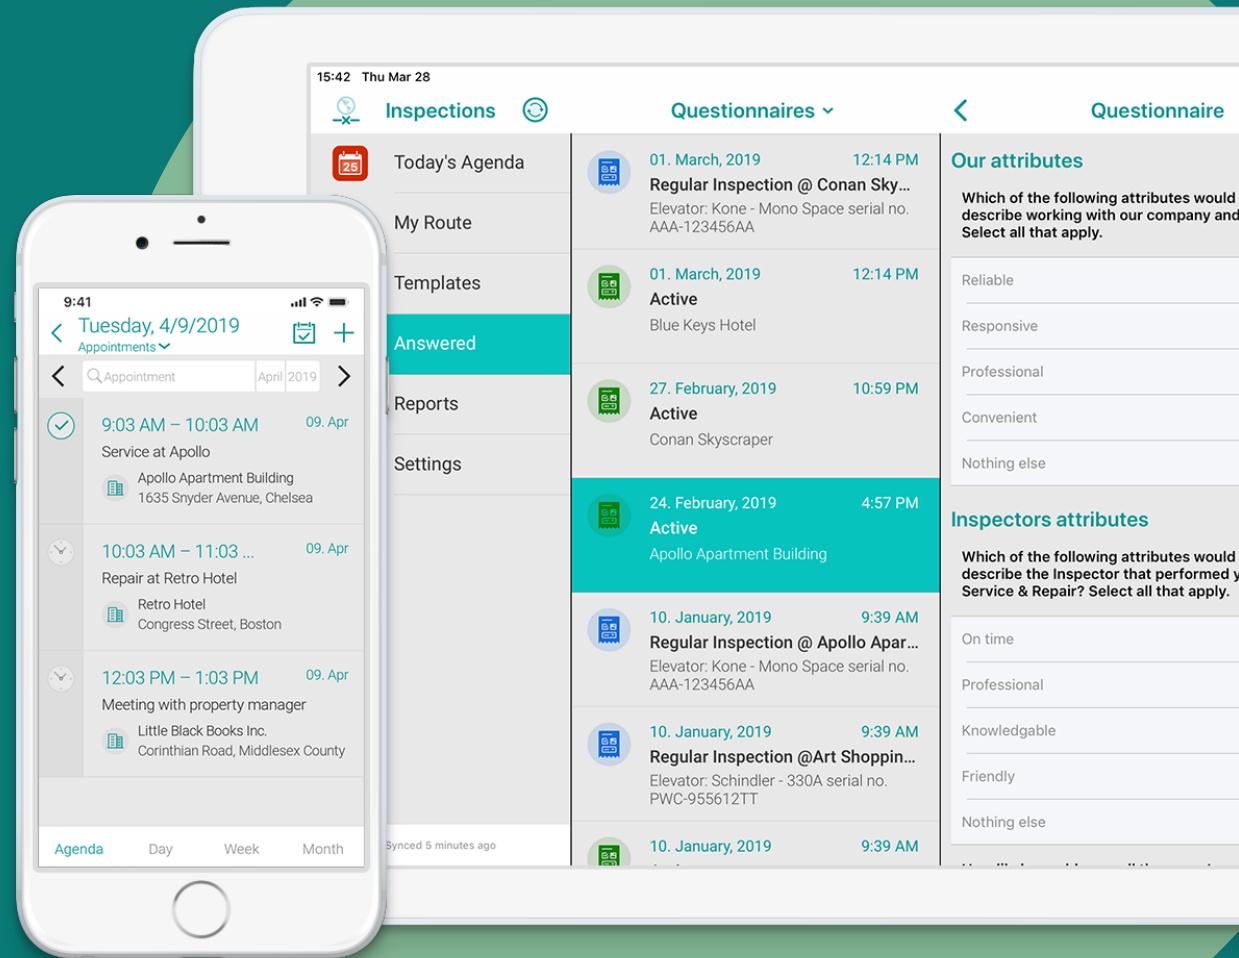

Scheduler

- Assign questionnaires to field staff
- Schedule appointments
- Oversee progress throughout the day – if anyone is finishing sooner than originally expected, you can task them with an additional inspection to help the team
- Auto-scheduling and custom rules to help with the planning are also available

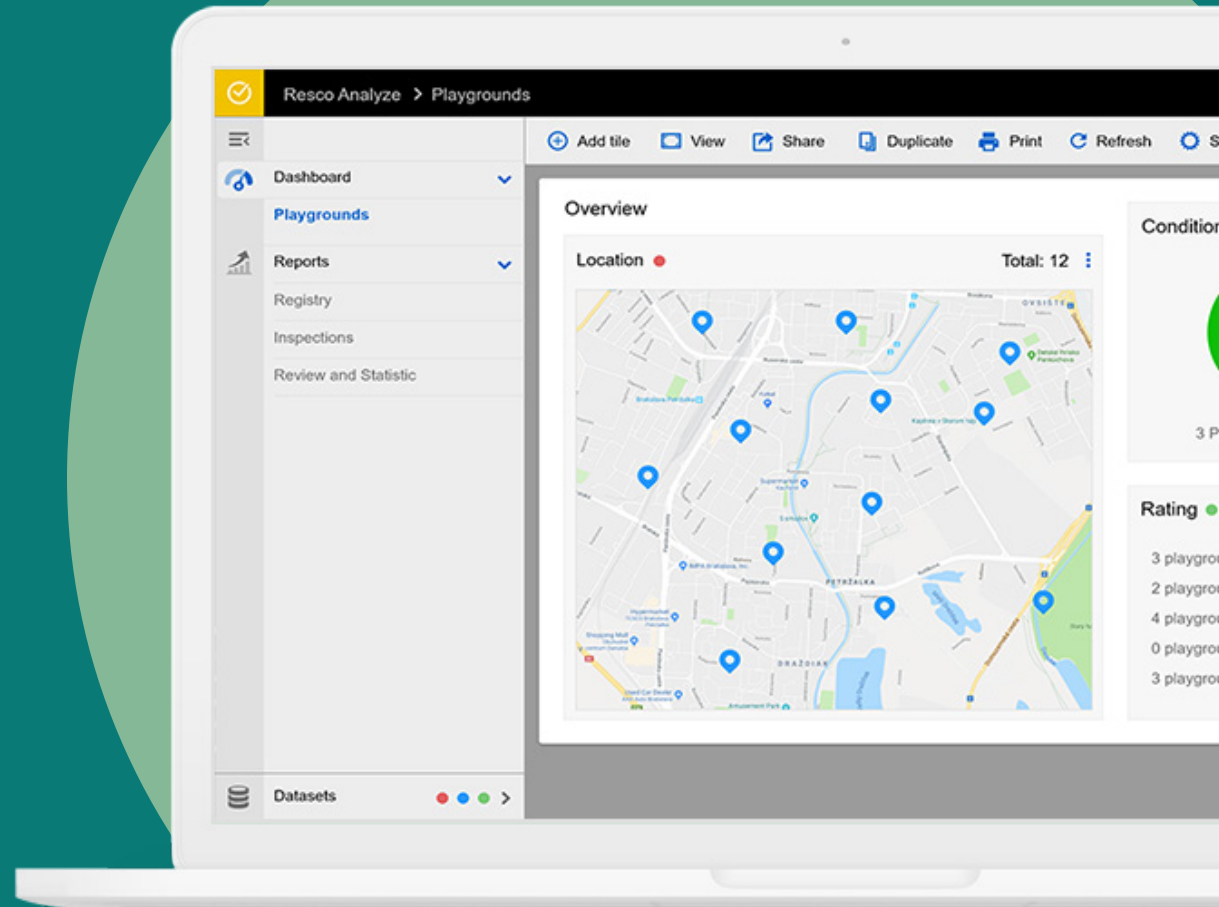

Inspector

- Start the inspection by filling out a questionnaire, snap a picture, annotate it, and collect the signature at the end
- Plan all work trips from a single app with the built-in calendar and route viewer
- All related documents, manuals and images are also available at your fingertips
- Check-in/Check-out at the location
- Fully functional even offline
- Runs smoothly on any mobile device – phone, tablet, or laptop
- Customizable look & feel

Analyst

- Evaluate and visualize the data sent back by the inspectors
- Go through the answers one-by-one
- Create graphs, custom reports, and configurable dashboards on top of your data
- Export raw data and analyze it further with other tools, such as Power BI
